

The AXIS D safety post is intended for use as an anchor point to prevent falling from a height for three people at the same time.

It was developed for the purpose of securing people working at heights. It is basically used as end/ corner supports in ACCENLINE horizontal rope systems in accordance with EN 795 C, but has been successfully used as an anchor point, e.g. for rope access. AXIS D safety post is made entirely of stainless steel (material 1.4301). The total maximum height of the post is up to 1000 mm. Standard post base dimensions: 220 x 220 mm, diameter 50 mm.

On the post, a fastening point with a swivel can be mounted allowing it to rotate in all directions 360°. This prevents the formation of loops when the safety line is fastened. Screw the post with 12x120 mm diameter screws to wooden structural elements. The AXIS D post meets the requirements of the standard for anchor devices EN795, class A, C and CEN / TS 16415

Specification

Material	INOX
Weight	4 kg
Size	300-1000 mm
Users	3
Standard	EN 795 A/C, CEN/TS 16415
Warranty	12 months

Mounting substrates

Wooden structural elements
