

The AXIS K safety post is made entirely of stainless steel (material 1.4301). The total maximum height of the post is up to 1000 mm. Standard post base dimensions: 220 x 220 mm, diameter 50 mm.

On the post, a fastening point with a swivel can be mounted allowing it to rotate in all directions 360°. This prevents the formation of loops when the safety line is fastened.

The post is designed for mounting to hollow core slabs using special HUS type anchors. AXIS K post meets the requirements of the EN795, standard for anchoring devices, class A/C and CEN/TS 16415.

Specification

Material	INOX
Weight	4 kg
Size	300-1000 mm
Users	3
Standard	EN 795 A/C, CEN/TS 16415
Warranty	12 months

Mounting substrates

Reinforced concrete hollow core slabs
