

**TWINFIX is an inertia deadweight anchor meeting the requirements of EN 795 type E for use by 2 people at a time.**

Dedicated to flat roofs with a maximum pitch of 5°. The self-supporting structure of the device uses its weight of 235kg and friction against the surface on which it is placed without penetrating the roof sheathing. The base is made up of concrete weights fastened with a steel frame creating a base dimension of 1mx1m. Simple and quick assembly, compact size. It can be used as an independent anchoring device or as a support in a rope system.
